

Crucible Skill Quality Report

Report digest:

sha256:30746926170db22b5bd4f5290ab9aeb8a7cd6c21eb412bf84d17b24c2ddaf91d

Skills scanned: 1 -- MODIFY: 1

retry-example -- MODIFY

The recommendation to MODIFY follows because the skill exhibits methodological vacuity (finding-0001), lacks any verification path for its normative rule (finding-0002), and contains an unbounded retry instruction (finding-0003); together these deficiencies indicate the skill's current form does not meet methodological invariants and therefore requires revision rather than acceptance or removal.

Next steps (prioritized):

1. Add explicit procedural steps and checks that define how the normative rule is executed and verified.
2. Introduce a bounded retry mechanism (e.g., maximum attempts, timeout, or backoff) for rule-0001.
3. Update the skill documentation to reflect the added steps, checks, and retry bounds, ensuring a clear verification path.

Finding	Status	Class	Evidence
finding-0001	PENDING	METHODOLOGICAL_VACUITY	skill has 1 normative rule(s) but 0 procedural steps and 0 checks
finding-0002	CONFIRMED	REQUIREMENT_WITHOUT_CHECK	skill has 1 normative rule(s) but 0 extracted checks
finding-0003	CONFIRMED	UNBOUNDED_RETRY	rule rule-0001 contains a retry/repeat indicator without an explicit bound (max attempts, timeout, backoff, or circuit breaker)

Methodology

The recommendation for every skill (KEEP, NEEDS_CONFIRMATION, MODIFY, or DELETE) is computed by a deterministic rule over L2 audit findings and L2.5/L12 confirmation verdicts, before any language model is consulted. The model is given that decision as a fixed fact and asked only to explain it in prose, citing findings by id. Every finding id the model cites is checked after the fact against the sealed findings for that skill; an id that does not exist there is listed as an untraceable claim, not silently presented as evidence. report_digest is the canonical seal of this report: recompute it independently to confirm this rendering was not altered after the fact.
